SUMMARY

Currently a 4th year computer science student with hands-on experience of web and Mobile app development. Build Academic and Self learning Projects including a Project storage platform with Rag Based Chat System, A deep-learning salary predictor Platform, A Civic Issue Reporting Mobile App and Much more. Seeking a web/mobile development internship to contribute my academic knowledge and passion and get a practical development exposure.

SKILLS

Web Development: React.js, JavaScript, Node.js, Flask, REST API, HTML/CSS

App Development: React-Native, TypeScript

Language: Java, Python, C#, ASP.NET

Databases: MySQL, PostgreSQL, SQL Server, MongoDB

Tools: Git/GitHub, VS Code, IntelliJ, Android Studio, Anaconda

EDUCATION

Shaheed Zulfikar Ali Bhutto Institute of Science and Technology Karachi (SZABIST)

Bachelor of Science in Computer Science (Expected 2027)

Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Design, Web Technologies, Software Construction & Development, Artificial Intelligence, Operating Systems, Hybrid Mobile Application Development

PROJECTS

Project Vault: AI Project Memory System

TypeScript , Next.js , PostgreSQL , Gemini API , Mermaid.js

[Live Link](#)

- Combats knowledge decay by providing a dedicated space for detailed project documentation.
- Integrates Google Gemini 2.5 Flash for AI-powered documentation generation and project-specific chat.

Meal Sync: AI-Powered Catering Management System

React.js , PostgreSQL , Gemini API , Nest.js , Prisma

[Live Link](#)

- Built a multi-tenant catering platform serving hospitals and universities from one codebase, and 6 role-based permission levels.
- Integrated Google Gemini across 4 AI features menu generation, allergy conflict detection, procurement forecasting, and waste analysis each backed by a deterministic fallback for uptime.

Fix Karachi— Civic Issue Reporting Mobile App

React-Native , TypeScript , JavaScript , HTML/CSS

[Live Link](#)

- Developed a civic-reporting mobile app where residents can report local issues (broken roads, water leakage).
- Designed the admin dashboard to give city staff a consolidated view of all reported issues, reducing the manual effort of tracking citizen complaints across separate channels.

Event Sphere: University Event Management Mobile App

React-Native , TypeScript , JavaScript , HTML/CSS

[Live Link](#)

- Built a cross-platform mobile app enabling students to browse and register for university event
- Implemented role-based access (student vs. admin) and a registration flow, structuring reusable components to support two distinct user experiences in a single codebase.

Pay Predict: Salary Prediction Neural Network

Python , PyTorch , Pandas , Matplotlib , Flask

[Live Link](#)

- Built a deep learning regression model in PyTorch to predict employee salaries from position-level data.
- Applied feature scaling, train/test splitting, and network optimization to improve prediction accuracy.

Smart Vote: Online Voting System Website

ASP.NET Core MVC , SQL Server , REST APIs

[Github](#)

- Built a secure voting platform with role-based admin, voter registration, election management, and real-time results dashboard.
- Designed and implemented REST API endpoints to handle concurrent voting requests while maintaining data integrity.

LEADERSHIP & EXPERIENCE

Tech Core Director (Zab-e-fest, SZABIST University 2026)

- Coordinated a 6–10 members technical team to manage event systems and digital infrastructure of 300-600 participants for Zab-e-fest.

Marketing Director (ACM Society, SZABIST University 2025-2026)

- Increased student engagement by leading a 6–10 persons marketing team through multi-channel promotional campaigns.

Brand Ambassador (Developers Day, FAST University 2026)

- Expanded event by representing Developers Day to the student tech community through direct outreach and peer engagement.
